

Folding Shutter Corporation & Castle Impact Windows

<https://www.castleimpactwindows.com/>

With over 100,000 installations since our beginnings in 1969, we've been providing South Florida with a complete line of high-quality hurricane protection solutions. Whether you are in the market for aluminum or vinyl impact windows and doors, or hurricane shutters, we can help get your home secure and ready for a storm.

Hurricane Shutter Systems Built for the Demands of Condominium Buildings

Condominium properties face structural conditions that are very different from single-family homes. Wind speeds intensify as elevation increases. Corner units take on higher impact loads. Stairwells, walkways, and shared balconies restrict installation access. Castle Impact Windows Doors & Shutters designs every shutter system around these specific challenges, ensuring each opening receives protection that aligns with its height, orientation, and exposure zone.

Our team evaluates the building's existing envelope, measures every unit individually, and provides a detailed plan that supports long-term storm performance and compliance. This level of assessment gives property managers and boards confidence that their building is protected with accurate engineering and dependable installation standards.

Rolling Shutters for Consistent Protection Across Upper Floors

Rolling shutters offer smooth operation, clean lines, and dependable strength for condominiums that need an automatic or semi-automatic solution. These systems perform well on large glass doors, stacked balconies, and openings that face open water. Their low-profile design maintains the building's appearance while giving residents reliable protection before each storm.

Accordion Shutters Manufactured In-House

Our accordion shutters are built in-house to ensure consistent quality for multi-unit projects. Each system moves easily along reinforced tracks, locks securely, and withstands repeated coastal weather. This is especially important for buildings that need a uniform shutter style across all units. In-house production allows us to match measurements exactly and resolve complex openings that require custom work.

Key Advantages of Our Condominium Shutter Installations

Condominium buildings require accurate engineering and solutions that work across multiple units and elevations. Castle Impact Windows Doors & Shutters supports property managers, building boards, and owners with a complete service process that results in dependable storm protection and consistent visual appeal across the entire structure.

Engineered for High-Rise Wind Pressures

Our team performs full wind-load evaluations for each unit so your building receives shutters that match its required strength level. Elevated floors, corner units, and ocean-facing exposures are assessed individually to ensure every opening is reinforced correctly. This includes:

- **Detailed design pressure measurements** tailored to each floor height
- **Evaluation of building orientation** to determine wind direction and uplift risks
- **Product recommendations** aligned with Florida's strict code requirements

Start Your Condominium Shutter Project with a Tailored Evaluation

Preparing a condominium building for hurricane season requires solutions that align with its structure, height, and community standards. Our specialists review every opening, confirm design pressures, and provide product recommendations that support long-term performance in coastal conditions. You receive a clear, accurate assessment backed by decades of experience installing shutter systems for multi-unit and high-rise properties across Florida.

Request your condominium shutter estimate today and speak with an impact protection expert who can guide your building through every step of the process.
